

Flipbook template

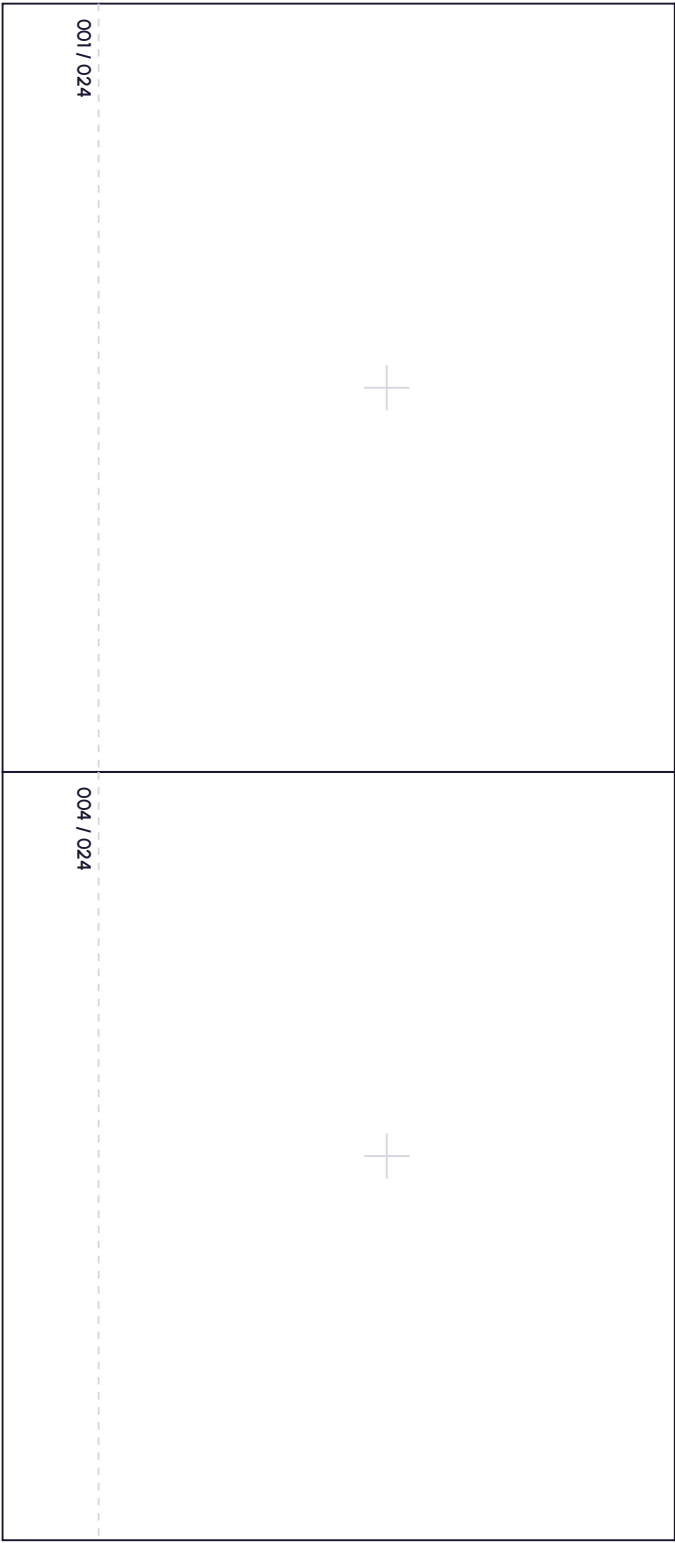

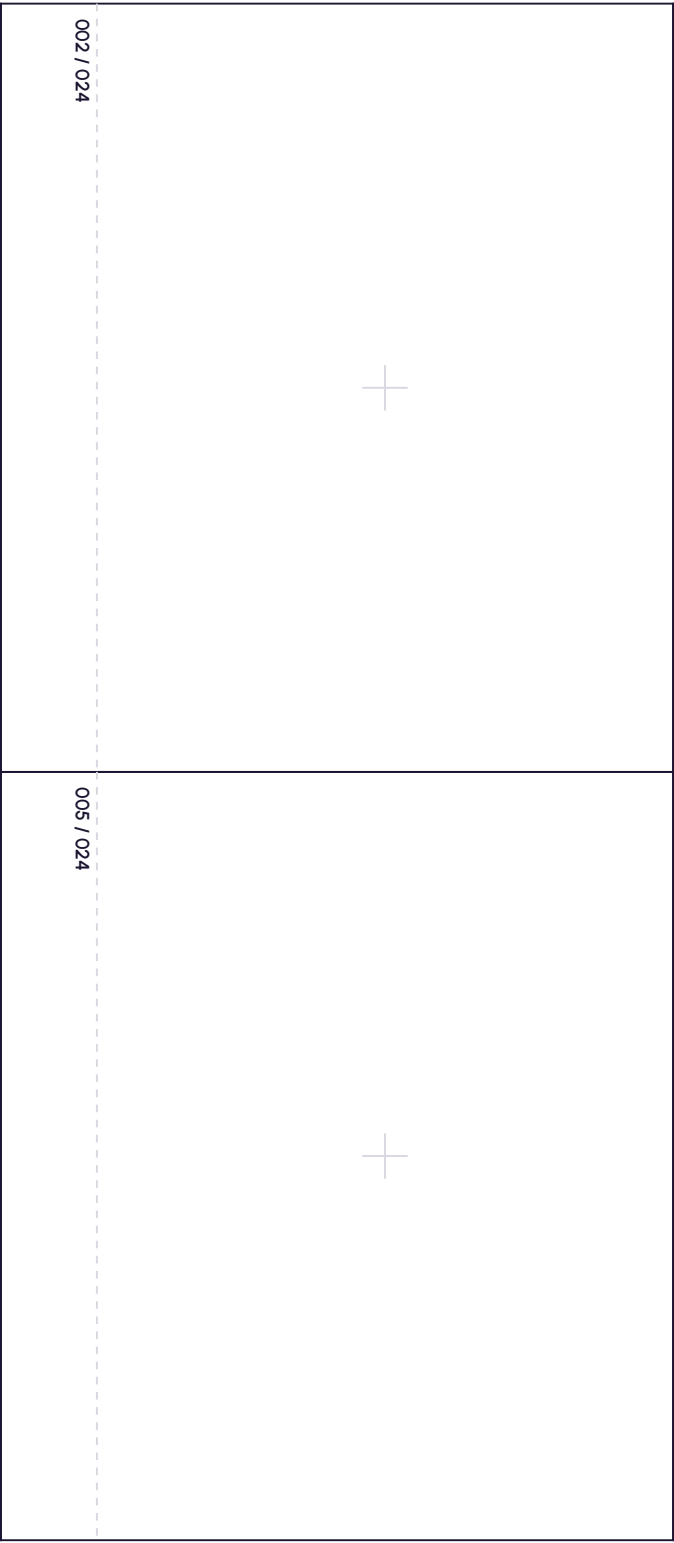

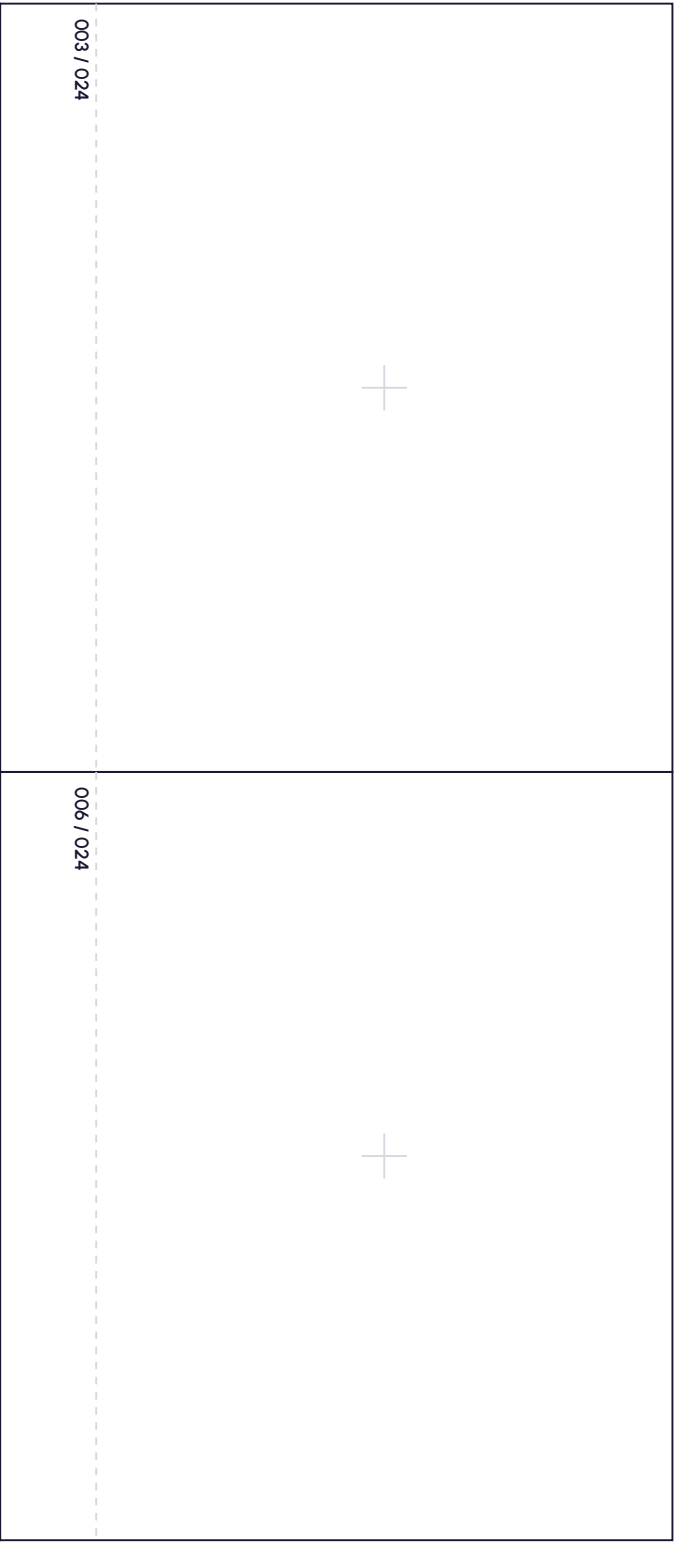

A4 · 6 pages per sheet · 24 pages · free from Flipage

How to use it

1. Print sheets 2 to 5 on A4 in landscape at 100% (actual size, not fit to page). A4 cardstock, 230 GSM, flips best; ordinary paper is fine for a first try.
2. Draw or glue one picture per page in the white area, moving your subject a little from page to page. The faint cross sits in the same spot on every page, so you can keep the background still.
3. Cut along the printed borders.
4. Stack the pages in number order and tap the edges square.
5. Bind along the numbered strip on the left with a binder clip, two staples or strong tape. Hold the strip and flip the free edge with your thumb.

Want it made from a video?

Flipage turns a short clip into pages like these, numbered and ready to cut, in the original look or styles like Pencil Sketch. Free to start at flipage.app
